2. With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application and necessary to the claimed invention, this opinion has been established on the basis of:

a. type of material

☐ a sequence listing

☐ table(s) related to the sequence listing

b. format of material

☐ in written format

☐ in computer readable form

c. time of filing/furnishing

☐ contained in international application as filed.

☐ filed together with the international application in computer readable form.

☐ furnished subsequently to this Authority for the purposes of search.

3. ☐ In addition, in the case that more than one version or copy of a sequence listing and/or table relating thereto has been filed or furnished, the required statements that the information in the subsequent or additional copies is identical to that in the application as filed or does not go beyond the application as filed, as appropriate, were furnished.

International application No.
PCT/US04/29857

Box No. V Reasoned statement under Rule 43 bis.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Claims <u>1-41</u>	YES
	Claims <u>NONE</u>	NO
Inventive step (IS)	Claims <u>1-41</u>	YES
	Claims <u>NONE</u>	NO
Industrial applicability (IA)	Claims <u>1-41</u>	YES
	Claims <u>NONE</u>	NO

2. Citations and explanations:

Claims 1-41 meet the criteria set out in PCT Article 33(2)-(4), because the prior art does not teach or fairly suggest, regarding claim 1, the feature of "performing digital image coordinate transformations on selected intermediate images, the parameters of coordinate transformations being chosen to account for view-angles of the projections from which the intermediate images have been produced, and for the Fourier characteristics of the intermediate-images" and "aggregating subsets of the transformed intermediate-images produced in step (b) to produce aggregate intermediate images," those, in combination with the other claim limitations. Regarding claim 19, the prior art does not teach or fairly suggest the feature of "performing digital image resampling on selected intermediate images, the location of samples being chosen to account for the view angles of the selected projections and for the Fourier characteristics of the intermediate images" and "aggregating selected subsets of the resampled intermediate images to produce aggregate intermediate images," those, in combination with the other claim limitations. Regarding claim 30, the prior art does not teach or fairly suggest the feature of "performing digital image coordinate transformations on upsampled/downsampled intermediate images" and aggregating subsets of the transformed intermediate images produced in step (c) to produce aggregate intermediate images," those, in combination with the other claim limitations.
